

1. Token Architecture & Minimalist Principles

ConsMan's design system follows a 3-tier token structure: **Primitive** (raw values), **Semantic** (intent & context), and **Component** (specific UI controls). This architecture ensures high contrast, fast UI rendering, and strict consistency across desktop CRM screens and mobile student intake forms.

Tier 1: Primitives

Static values such as `blue-900` or `space-16`. Never applied directly to UI elements.

Tier 2: Semantic

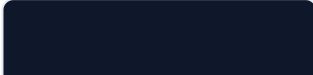

Context-driven tokens like `color.surface.primary` or `color.status.converted`.

Tier 3: Component

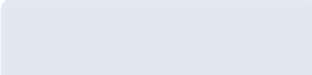

Scoped tokens such as `button.primary.bg` or `input.border.focus`.

2. Color System Tokens

Brand & Primary Semantics

 Brand Navy #1E3A8A <code>color.brand.primary</code>	 Brand Emerald #059669 <code>color.brand.accent</code>	 Slate Dark #0F172A <code>color.text.primary</code>	 Slate Medium #64748B <code>color.text.secondary</code>
---	---	---	--

Surfaces & Neutral Canvas

 Pure White #FFFFFF <code>color.surface.card</code>	 App Backdrop #F8FACF <code>color.surface.bg</code>	 Muted Surface #F1F5F9 <code>color.surface.muted</code>	 Border Neutral #E2E8F0 <code>color.border.default</code>
--	--	---	--

Status & Pipeline Semantics

STATUS ROLE	TOKEN NAME	HEX CODE	PREVIEW STATE
Lead Converted / Success	<code>color.status.success</code>	#15803D / #DCFCE7	Converted
New Lead / Info	<code>color.status.info</code>	#1E3A8A / #EFF6FF	New Lead
Pending / Follow-up Due	<code>color.status.warning</code>	#B45309 / #FEF3C7	Warm / Pending
Overdue / Urgent / Lost	<code>color.status.danger</code>	#BE123C / #FFE4E6	Overdue 24h
Archived / Unqualified	<code>color.status.neutral</code>	#475569 / #F1F5F9	Archived

ConsMan

TYPOGRAPHY, SPACING & COMPONENT RULES

Inter / System UI
8px Grid Scale

3. Typography Scale & Hierarchy

ROLE	TOKEN NAME	SIZE / LINE HEIGHT	WEIGHT / STYLE
Display H1	typography.heading.h1	20pt (26px) / 1.2	800 Bold (-0.02em)
Section H2	typography.heading.h2	14pt (18px) / 1.3	700 Bold (-0.01em)
Card Heading H3	typography.heading.h3	11.5pt (15px) / 1.35	600 SemiBold
Body Default	typography.body.md	9.5pt (13px) / 1.5	400 Regular
Body Small / Secondary	typography.body.sm	8.5pt (11px) / 1.4	400 Regular
Caption / Badges	typography.caption	7.5pt (10px) / 1.2	600 SemiBold (ALL CAPS)

4. Spatial Grid & Layout Tokens

Layouts adhere strictly to an 8px base grid system (4px micro-adjustments permitted for inline form controls).

Spacing Scale

space-1 (4px)	Micro gaps, icon offsets
space-2 (8px)	Button inline padding, input gap
space-3 (12px)	Compact card interior padding
space-4 (16px)	Standard container padding
space-6 (24px)	Section separation gap

Borders & Radii

radius-sm (4px)	Input fields, table badges
radius-md (6px)	Cards, modals, slide-overs
radius-lg (12px)	Public QR intake container
border-subtle	1px solid #E2E8F0
border-focus	2px solid #1E3A8A

5. Component Tokens & State Rules

UI COMPONENT	STATE	COMPONENT TOKEN MAPPING	VISUAL OUTCOME
Primary Button	Default	button.primary.bg	Background #1E3A8A, Text #FFFFFF, Radius 4px
Primary Button	Hover / Focus	button.primary.hover	Background #1D4ED8, Focus Ring 2px #93C5FD
Input Control	Resting	input.bg / border	Background #FFFFFF, Border 1px #CBD5E1
Input Control	Focus / Active	input.border.active	Border 2px #1E3A8A, Outline None
Data Table Row	Hover	table.row.hover	Background #F8FAFC (Subtle Slate Tint)

6. Accessibility & Contrast Metrics

WCAG AA Compliance

All body text against surface cards achieves a minimum contrast ratio of **8.6:1** (exceeding the 4.5:1 requirement). Primary Navy buttons achieve **12.4:1** against white typography.

Minimalist Performance

Zero CSS drop-shadows (`box-shadow: none`). All structural depth is established through 1px crisp borders and #F8FAFC surface tints.
